Hi,
do you plan to integrate these drivers ?
How to update a running Proxmox install so it uses these drivers ?

http://sourceforge.net/projects/e1000/files/e1000e stable/

Because I can not install the latest Intel's drivers in a x64 windows VM when this VM has a e1000 board set up ... Installer keeps saying there is no Intel board installed

do you talk about a guest issue? pls explain.

Best regards,
Tom

Yes I've 2 guests both windows 2008 x64 (R2).
They are working fine with the original "microsoft" intel driver (these guest are configured to use e1000).

I've tryed to install the latest Intel drivers (x64 for 2008 R2/Windows 7), but

when installing it says "no intel board was detected, installation aborted".

Any idea ?

1. Why do you want to change a fine working driver?
2. Which driver package do use (send me the link)? based on my knowledge Intel recommend to use the included one for Win2008r2.

Best regards,
Tom

It is working fine but i have a very very slow connection issue with a windows ssh server I've used without any issue for 4 years.

As I heared the intel driver would be better than the one included by default I've tryed to install it but it won't (see first post).

RDP connections to guest are very fast, SSH connections to guest are fast only when the handshake is finished, but this one takes ... more than 60 seconds ! And I really don't know why suddenly it happens all the time (it was fine for a month).
I upgraded the ssh server (WinSSHD) to a newer version, I changed the SSH clients I used. No matter still 60 seconds (some of the ssh clients I tested timeout before that and would never connect).

if you answer my question I can try to help. again, which driver package do you want to apply?

Best regards,
Tom

http://www.intel.com/support/network/sb/cs-006120.htm
Windows 7 (64-bit) and Server 2008 R2*Driver, Intel® PROSet, ANS, and SNMPPROWIN7X64.exe

this is not a driver package for the Intel 1000 MT, so the error message is correct.

back to the subject of this post (**e1000 drivers v1.1.2**):
these are drivers for the kernel and not related to this issue.

=> use the integrated drivers as suggested from Intel and Microsoft

Best regards,
Tom

Maybe a problem with your DNS settings?

Best regards,
Dietmar
