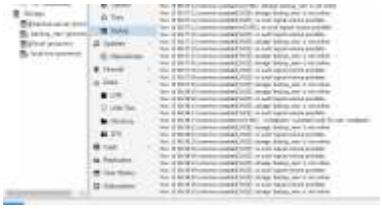
Hello all,

during the night my backup hanged and i was forced to reboot my proxmox host using hw button. after reboot my local-lvm dissapeard and i lost access to my virtual machines. could someone help me to restore it? thank you.

this is what i have in log:
no such logical volume pve/data



Code:

```
root@proxmox:~#  pvesm lvmthinscan pve
  Volume group "pve" not found
  Cannot process volume group pve
command '/sbin/lvs --separator : --noheadings --units b --unbuffered --nosuf
```

and this is my lsblk:

Code:

```
root@proxmox:~# lsblk

Hi,
what is the output of the following?

Code:

```
pvs
vgs
lvs
pveversion -v
```

Are there any related error messages during boot in the syslog?

Best regards,
Fiona

@fiona - hello, so the issue persist after reboot:

Code:

```
Linux proxmox 5.15.64-1-pve #1 SMP PVE 5.15.64-1 (Thu, 13 Oct 2022 10:30:34

root@proxmox:~# pvs
root@proxmox:~# vgs
root@proxmox:~# lvs
root@proxmox:~#
```

EDIT: and only hw reboot will bring back the local-lvm, reboot trough terminal will not fix the missing local-lvm

Please check the syslog during boot. There really should be some hints why LVM can't initialize properly.

Best regards,
Fiona
