Hello

done a Installation on a Virtuall VM on a Proxmox Node
with a 25Gig Disk for installation and 4GiB RAM.
then i added another 500G Disk for Datas.

so far the installation did work, just did not accept when i did change the IP
Address!

if i go to Administration and Disks i do see the 500G Disk
i created a ZFS-Disk

which is visible in the Datastore!

On my PVE i did add as Storage the PBS with Fingerprint and seems OK
i crate a Backup destination the PBS for two small VMs

running the Backup it hangs on with

INFO: trying to get global lock - waiting...
now for 10 Minutes

have a nice day
vinc

OK the error is a second running Backuptask

this is not an error, just the information that your task is waiting. you cannot run two backup in parallel from the same Proxmox VE host.

Best regards,
Tom
