🔗 #1

Hello all,

during the night my backup hanged and i was forced to reboot my proxmox host using hw button. after reboot my local-lvm dissapeard and i lost access to my virtual machines. could someone help me to restore it? thank you.

this is what i have in log:
no such logical volume pve/data

Code:

```
root@proxmox:~# pvesm lvmthinscan pve
Volume group "pve" not found
Cannot process volume group pve
command '/sbin/lvs --separator : --noheadings --units b --unbuffered --nosuf
```

and this is my lsblk:

Code:

```
root@proxmox:~# lsblk
NAME                                MAJ:MIN RM  SIZE RO TYPE MOUNTPOINT
sda                                8:0    0   2.7T  0 disk

Hi,
what is the output of the following?

Code:

```
pvs
vgs
lvs
pveversion -v
```

Are there any related error messages during boot in the syslog?

Best regards,
Fiona

@fiona - Hello,

Mio3000

New Member

after couple of reboots it started working again...

Code:

```

root@proxmox:~# pvs
  PV          VG Fmt Attr PSize   PFree
  /dev/sdd3   pve lvm2 a--  <476.44g <16.00g
root@proxmox:~# vgs
  VG #PV #LV #SN Attr   VSize   VFree
  pve  1  12  0 wz--n- <476.44g <16.00g
root@proxmox:~# lvs
  LV          VG Attr       LSize   Pool Origin Data%  Meta%  Move Log C
  data        pve twi-aotz-- <349.31g          43.38  2.13
  root        pve -wi-ao---- 96.00g
  swap        pve -wi-ao----  8.00g
  vm-100-disk-0 pve Vwi-aotz-- 32.00g data    7.49
  vm-103-disk-0 pve Vwi-a-tz-- 70.00g data   37.75

glusterfs-client: 9.2-1
ifupdown: 0.8.36+pve2
kvm-control-daemon: 1.4-1
libjs-extjs: 7.0.0-1

```

i will try another reboot or shutdown in one hour, if the issue still persist... for now no errors in syslog

@fiona - hello, so the issue persist after reboot:

Code:

Linux proxmox 5.15.64-1-pve #1 SMP PVE 5.15.64-1 (Thu, 13 Oct 2022 10:30:34

The programs included with the Debian GNU/Linux system are free software; the exact distribution terms for each program are described in the individual files in /usr/share/doc/*/copyright.

Last login: Tue Nov 15 13:55:42 2022 from 192.168.123.109

root@proxmox:~# pvs

root@proxmox:~# vgs

root@proxmox:~# lvs

root@proxmox:~#

EDIT: and only hw reboot will bring back the local-lvm, reboot trough terminal will not fix the missing local-lvm

[Click to expand...](#)

Please check the syslog during boot. There really should be some hints why LVM can't initialize properly.

Best regards,
Fiona

@bbgeek17 - i reverted changes in the lvm.conf, and now it is working, i dont
know why it did not popup when i tested it couple of weeks ago, and did also
the reboot, all was ok... thank you for finiding this
